ACIDS & BASES

1. DEFINITIONS

Bronsted-Lowry: proton donor/acceptor
Lewis: electron pair acceptor/donor

2. pH

pH + pOH = 14

3. Ka, Kb

pKa = -log Ka
Lower pKa -> stronger acid

4. BUFFERS
Henderson-Hasselbalch:

5. TITRATION
Equivalence: moles acid = moles base
Curve types: strong/strong, weak/strong
Indicators:
Phenolphthalein: 8.2-10
Methyl orange: 3.1-4.4

6. SOLUBILITY
Ksp = product of ion concentrations
Common ion effect
