CELL BIOLOGY

1. CELL THEORY
All living = cells
Basic unit of life
Cells from cells

2. PROKARYOTIC vs EUKARYOTIC

3. ORGANELLES
Nucleus: DNA
Mitochondria: ATP
Ribosomes: protein
Rough ER: protein synth
Smooth ER: lipids
Golgi: packaging
Lysosomes: digestion
Vacuoles: storage
Chloroplasts: photosynthesis
Cell wall: cellulose

4. MEMBRANE
Fluid mosaic: phospholipid + proteins + cholesterol

Transport:
Passive: diffusion, osmosis, facilitated
Active: Na-K pump

Tonicity: hyper/hypo/isotonic

5. DIVISION
Mitosis: 2 identical cells
Interphase, Prophase, Metaphase, Anaphase, Telophase

Meiosis: 4 haploid cells
Crossing over, independent assortment

6. TRANSPORT
Endocytosis, Exocytosis
Phagocytosis, Pinocytosis
